

## App Redesign & Updates

# About CatchZone™

CatchZone™ is a mobile application for Android® and iOS® built to help fishermen and fisherwomen check local regulations, in-season fish, display emergency updates, and register fishing tags on catches.

Registered tags are sent to relevant authorities automatically where participating (as of March 2024; the US states of Washington and Oregon).

Location and Map data derive from GSI data, as well as NOAA for the Weather page and relevant features.

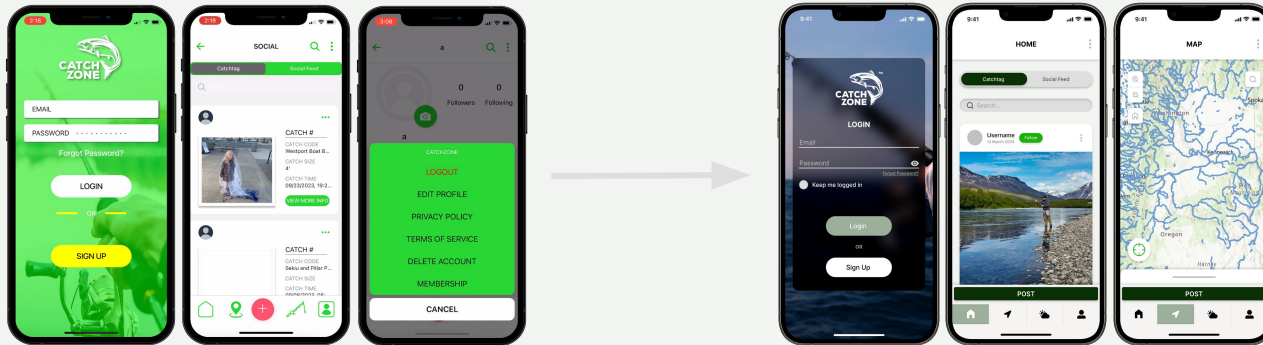

The app subscribed users only (monthly or yearly plans) and downloadable/purchasable through either the Apple App Store™ or Google Play Store™

# Project Goals

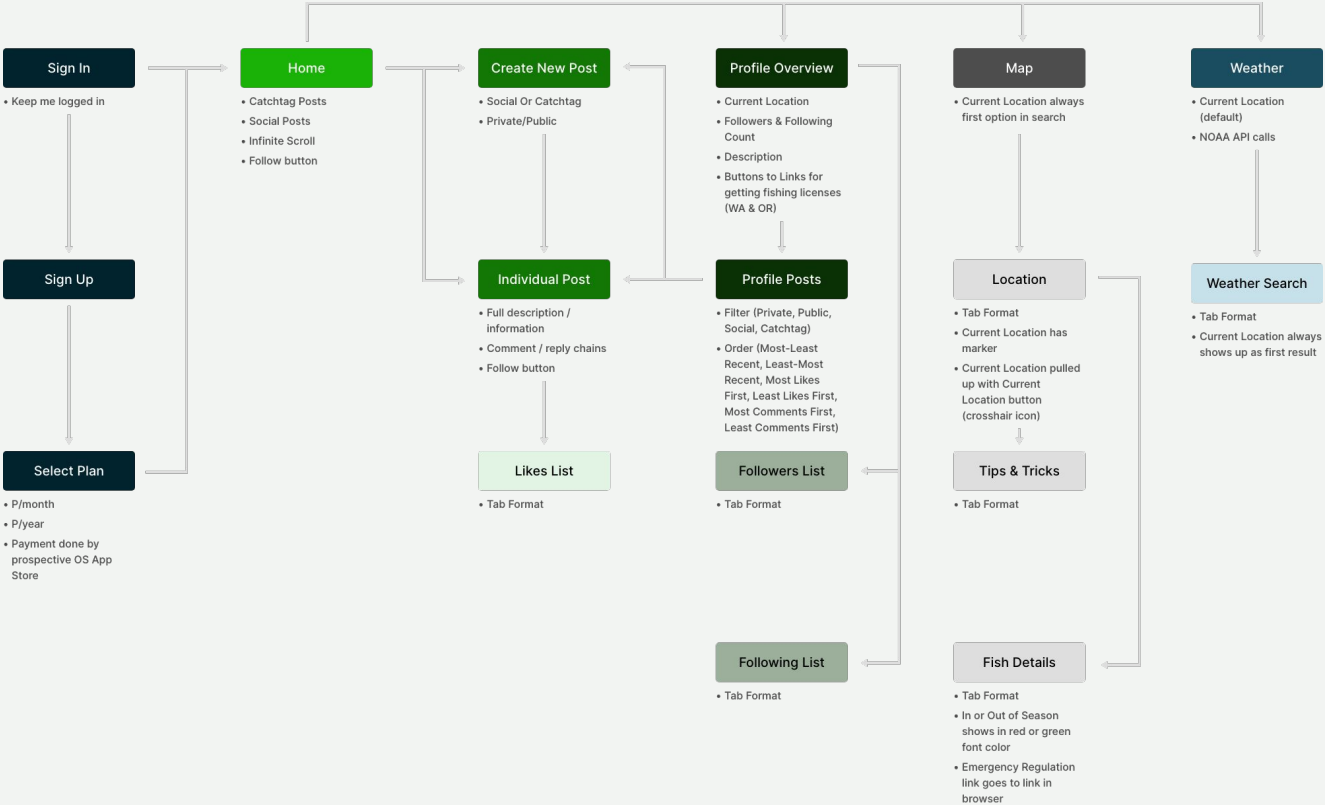

First Priority: Redesign the entire UI of the application to be much more appealing.

Second Priority: Edit UX to be more user-friendly where applicable.

Third Priority: Design and add new Weather feature

## Changes Made:

- New Icons & Style
- Added new Weather page feature
- Larger Navigation Buttons
  - Average use case for the app is outside, on location creating tags for fishing, often with wet/muddy/damp hands. Largest click area possible was paramount for improved navigation and overall UX.

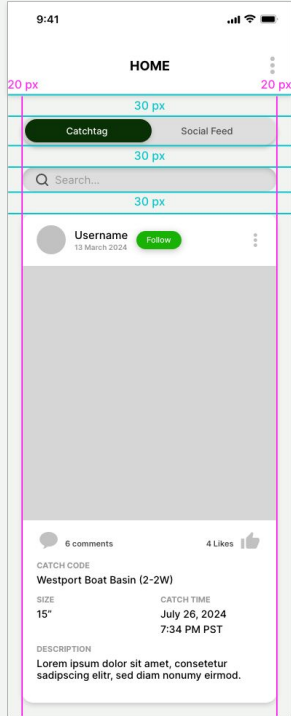

Even with added button for Weather page, standard page navigation increased **≈336%**. New Post button increased by **≈359%\***

\*Sizes calculated based on iPhone 12, 13, and 14 standard size of 390 px screen width

Footer:

Header:

# Weather: New Feature

Real-time weather updates for current location (default) or searched location.

All data derives from NOAA API for recognized locations the app covers.

Search always shows current location as first option.

# Results

- Whole app redesign was done with approval (barring small changes post-relaunch) in 32 days using Adobe Xd®.
- Social feed and features have been massively overhauled and become much more user-friendly.
- In the first month of redesign, CatchZone experienced  $\approx 25\%$  total subscriber growth.
